

THE SUCCESS OF HÄSELI TIMBER CONSTRUCTION SOLUTIONS - A STORY ABOUT INNOVATION AND VISIONS

Since 1988, the company Häseli has been active in timber construction and has specialized in the prefabrication of exposed wood surfaces made of solid wood panels. The company has always been characterized by a passion for natural materials and a striving for perfection.

The year 2019 marked a significant milestone in the history of the company. The decision to purchase a TW-Mill M from TechnoWood demonstrated the unshakable self-confidence and innovative strength of the 20-man operation.

The company's TW-Mill M has a size of 4 x 24m. In close cooperation with Techno-Wood, Häseli developed a tailor-made processing table that is optimized for their requirements. As a result, they can now carry out all cutting in-house, which gives them maximum flexibility with the possibility to produce individual components and materials at any time.

Company stays up to date with the latest technology and can meet the demands of the market. This flexibility has not only led to a large increase in order volume, but also to an increase in the number of employees to 30.

„According to the management: “Today, Häseli can proudly say that we can utilize the TW-Mill M to 120% – and we are already thinking about expanding it.”

It is impressive to see how Häseli timber construction solutions puts its visions into practice and is always looking for new challenges. We are excited to see what the future holds for Häseli timber construction solutions and will continue to report.

We are looking for talent!
